

Meeting summary — Jakarta EE Future Directions

The group discussed Jakarta EE 12 planning, with Michael Redlich reviewing recent specification plan reviews, especially concerns around Jakarta Validation and Jakarta Annotations. Jared Anderson noted that Jakarta Validation concerns appear to have been moved into repository issues and reflected in the release plan, reducing the immediate concern. The group also briefly discussed Jakarta EE 11 nearing completion and the need to look ahead to Jakarta EE 12.

Tanja raised the need for stronger community outreach and backup support for Neil in chairing and promoting the Future Directions meetings. The group agreed that meeting topics should be added to the shared agenda and that invitations should be promoted more broadly across relevant mailing lists and communities.

A substantial discussion covered the possible migration of MicroProfile into Jakarta EE. Michael summarized recent non-binding MicroProfile straw polls, including whether to terminate the MicroProfile Working Group, move released specs under Jakarta EE, and decide future namespaces after any move. Tanja emphasized that Jakarta EE is open to the idea, but no formal action can proceed until MicroProfile makes an official decision.

Actions / next steps

- Jared to cover Jakarta EE 12 highlights at the next meeting.
- Neil to send a broader meeting announcement and invite topic suggestions.
- Participants to add future discussion topics to the agenda backlog.
- Michael to share meeting information with Java Champions and JUG leaders and attend the weekly Jakarta EE call.
