

Jakarta EE Future Directions Interest Group

Sep 24, 2026

Attendance

- Neil Patterson (IBM)
- Michael Redlich (Garden State JUG)
- Josh Juneau
- Nathan Rauh (IBM)
- Tobias Frech (iJUG)
- Jan Westerkamp (iJUG)
- Roberto Cortez (IBM)
- Arjan Tijms (OmniFish)
- Emily Jiang (IBM)
- Geert Ijewski

Discussion Notes

Josh

- Merging the working groups would ease time for those involved in both, save money, and likely gain more community focused on the main goal of moving both technologies forward.

Arjan

- Some MicroProfile specifications were intended to be included in heritage Java EE.
 - Most notably: Config and Health.
 - Java EE 8 was delayed prompting the creation of MicroProfile in 2016.
- OmniFish customers are confused over the differences between MicroProfile and Jakarta EE.
- There is a contingent of developers that contribute to both MicroProfile and Jakarta EE specifications.
- We should decide on the merger first before worrying about issues associated with it.

Jan

- iJUG has felt it was important to join both working groups
- The time has come for a merger of the two working groups despite the more frequent releases of MicroProfile releases versus the less frequent releases of Jakarta EE.
- Until recently, the common general picture/vision has been missing from MicroProfile.
- What started as just moving Config to Jakarta EE evolved into moving all the specifications to Jakarta EE.
- Issues:
 - The proposal to retain the current MicroProfile namespace resulted in a failed vote in November 2025.
 - MicroProfile records their Community and Technical meetings; Jakarta EE does not record the Platform meetings.
- Jan suggested that we maintain the MicroProfile namespaces during the time of transition should there be a merger.
- The MicroProfile content could be moved to Jakarta EE in a separate profile.
 - A MicroProfile Profile, for example.
- Move MicroProfile Config first (CDI vs. non-CDI)
 - Move non-CDI part into Jakarta EE Core Profile
- We have the experience (and the tools) from the “Big Bang” to make the namespace change.
- We will need to schedule additional meetings to start the process of a potential merger.
- Membership for CCRs are required for Jakarta EE, but not MicroProfile.
- Voting is more stringent in the Jakarta EE Working Group versus the MicroProfile Working Group.

Emily

- Moving fast and breaking things are not done for no apparent reason. We should use this to argue for namespace changes. When an MP spec moves fast and breaks things, there should be solid technical reasons to do so.
- MicroProfile and Jakarta EE have been working well together and they have established a great ecosystem. As you know, MP adopts Jakarta EE core profile.
- There is no legal requirement to change namespaces in the Eclipse Foundation.

Tobias

- The namespace change is a non-issue at this time.
 - The focus should remain on merging the two working groups first.
 - The namespace change could be discussed after the fact.
- iJUG is a Contributing Member of both working groups.

- The Jakarta EE working group is free. It is expensive to join the MicroProfile working group.
- There should be an affordable working group structure in a merged Jakarta EE and MicroProfile WG so that JUGs can more easily participate.
- We should be concerned over competitive frameworks, such as Spring.

Roberto

- The ballot in November 2025 failed because most people didn't like the proposal from Emily and Roberto.
- The namespace change should happen after the merge, but it should be done with some basic plan to avoid renaming multiple times.
 - A namespace change can be challenging as there is a situation where a namespace change may have to happen twice.
- Implementation vendors such as SmallRye may consider not moving to the Jakarta namespace and dropping the MP namespace altogether, because:
 - Doing a blind rename of everything that moves, won't bring any value to the user.
 - We don't want to be in a situation where a second rename may be necessary when/if old MicroProfile APIs, now Jakarta, start to get moved/merged into other Jakarta specifications (REST Client → Jakarta REST, JWT → Security, OpenAPI → Jakarta REST, etc.).
 - Unfortunately, due to the absence of significant developments from MicroProfile, many of our consumers have to rely on SmallRye specific APIs. So in a situation where we know that MicroProfile won't advance further, and without a clear picture on how things are going to move from the Jakarta side, from our perspective, it may be safer to drop both and return to it only when there is actual progress.
- With the emergence of AI for code generation, developers may not have to be concerned over namespaces.
- It would be hard pressed to find applications that solely use MicroProfile and/or Jakarta EE specifications.

Resources

Thanks to Tobias Frech, here are Jakarta EE and MicroProfile resources:
