

Meeting summary — Jakarta EE Future Directions, June 26, 2025

The group discussed how to increase participation in the Jakarta EE Future Directions interest group. Tanja suggested a more continuous outreach campaign, using mailing lists, Slack, recordings, and focused topics to make the group's value clearer. She also proposed inviting external or adjacent-technology speakers for short discussions on how emerging areas such as AI, LangChain4j, quantum computing, virtual reality, and augmented reality may relate to enterprise Java and Jakarta EE.

Neil highlighted that June 26 was the Jakarta EE 11 launch date and reviewed key release themes, including the modernized TCK, Jakarta Data as a major new specification, and how EE 11 sets the foundation for Jakarta EE 12 work. Jared identified some inaccuracies in the release page's specification-update chart, and the group discussed using Jared's latest EE 11/EE 12 materials to correct the information.

Neil also reviewed the Jakarta EE content survey, emphasizing its importance for understanding what content the community wants, how people consume it, and what would encourage broader participation. Participants agreed to share the survey and meeting information through their own communities and distribution lists.
